

VISION HITECH — Global Website Renewal · English Design Prototype

Two English homepage + sub-page design concepts for the renewal of <https://visionhitechsecurity.com/>, built as real, responsive, interactive websites and published as a public link for client review.

Public URL: <https://plastere3125.github.io/visionhitech-renewal/>

- Concept A — Global Vision Technology: <https://plastere3125.github.io/visionhitech-renewal/concept-a/>
- Concept B — Intelligent Vision System: <https://plastere3125.github.io/visionhitech-renewal/concept-b/>

Design prototype for review. Not the official VISION HITECH website. Search indexing is disabled (`robots: noindex`).

1. Project Overview

- Client: Visionhitech Co., Ltd. (Bucheon, Korea — CCTV cameras, recorders, VMS; established 1997)
- Goal: redesign the English site to the level of a global B2B video-security technology brand, without overstating company scale or capabilities.
- Deliverable of this phase: **2 design concepts** that differ in visual strategy, composition, grid, motion, product presentation and interaction — sharing one verified content layer.

2. Current Project Scope — English First, Japanese Later

Phase	Status
1 English website research	Done — see <code>VISIONHITECH_CONTENT_INVENTORY.md</code> , <code>REFERENCE_ANALYSIS.md</code>
2 English design concepts A / B	Done (this repository)
3 Public open link	GitHub Pages
4 Client / owner design review	Next
5 Full English website on approved concept	Pending
6 English QA & approval	Pending
7 Japanese localization	Pending — not started
8 Japanese website	Pending — not started

No Japanese page exists. The header shows **EN** (active) and **JP** as a disabled "coming soon" state.

3. VISION HITECH Website Structure

Source: `Website Structure Map_Visionhitech_260928.pdf` (client). Implemented as the global navigation of both concepts.

Products	Solutions	Support	Media Center	Company
IP Camera	Technology	Technical Documents	Notice	Our Mission
NVR	AI Vision	Marketing Materials	Event	History
HD Analog Camera	Video Security	Download	News Letter	Vision
DVR	Transportation	Security Policy	Youtube	Organization
Software	Vision Marine	Certificate & Compliance	LinkedIn	Location
Accessory		Warranty		Contact
		Tech Support		
		FAQ		

Prototype pages per concept: Home · Products (overview + filter) · Product detail (all 86 models) · Solutions overview · Solution detail (5) · Support · Company · Contact · Media Center.

4. Concept A — Global Vision Technology

Hardware-first, white/editorial, Hanwha Vision + Milesight balance.

- Archivo (expanded display width), black type, white/off-white/studio grey (#F1F2F3 — the exact background of VISION HITECH product photos, so products sit seamlessly), logo orange #F47B42 as a sparing accent.
- Hero: real product on a studio panel with **verified spec callouts** and a 4-product switcher (4K bullet, 4K dome, 36× PTZ, 16CH NVR).
- Bento grid with 7 cards in 5 ratios (large, tall, small, wide, medium) and different visual languages (product + type, demo footage, product cut, split low-light proof, photography).
- Carousel with category tabs, drag-to-compare technology section (VISION HITECH's own WDR / Ultra STARLUX / ROI / Smart IR demo images), tabbed solutions explorer, manufacturer pillars, support grid, dark inquiry CTA.
- Mega menu with category preview images; mobile accordion navigation.

5. Concept B — Intelligent Vision System

System-first, deep navy/charcoal, DEEPX + EdgeDX + Milesight balance.

- IBM Plex Sans + Plex Mono, single controlled light source, orange signal line (echo of the arc over the lens in the logo), camera-viewfinder bracket motif used sparingly.
- Hero: background-removed 4K dome + VISION HITECH Advanced ROI demo frame + 4-stage chain ticker.
- **Capture → Video Data → Analysis → Security Response** sticky scroll story; every point is a verified product/technology statement; "Analysis" is labelled *To be confirmed*.
- Technology bento (auto-wipe low-light proof, bit-rate readout, 3-frame Color-Night strip), interactive product-ecosystem diagram, honest AI Vision status section with reserved slots, application tiles, Transportation / Vision Marine split, spec-sheet model index with floating preview.
- Products page with sidebar filters (category / series / environment), grid ↔ list view; spec-sheet product detail with sticky section index.

6. References

Analysis in `REFERENCE_ANALYSIS.md`. Milesight (hierarchy, bento), EdgeDX (content depth), Hanwha Vision (global B2B presentation), DEEPX (technology visual language), Bettini Video (product → inquiry UX). **No reference content, claims, figures or assets are used.**

7. Current VISION HITECH Content Sources

- `https://visionhitechsecurity.com/` — WooCommerce Store API (85 products) + rendered product pages, About, CEO message, Certification, Location, Contact, Quality Management, Vision Technology pages, Download, Warranty, News.
- `https://www.visionhitech.co.kr/` — Korean corporate pages (checked for Transportation / Marine / AI evidence; patents list).
- Extraction script: `scripts/extract-products.py` → `src/data/products.generated.json` (full) and `src/data/catalog.generated.json` (light client index).
- Status of every item (VERIFIED / MISSING / PLACEHOLDER REQUIRED / NEEDS CLIENT CONFIRMATION):
`VISIONHITECH_CONTENT_INVENTORY.md`.

8. Asset Sources

`ASSET_SOURCES.md` — logos (client), 85 product photos and site images (VISION HITECH website), 4 Wikimedia Commons photos (CC0 / CC BY 2.0, credited on-image), fonts (OFL). No AI-generated or AI-altered product imagery.

9. Tech Stack

- Next.js 16.3 (App Router, `output: "export"` static export), React 19, TypeScript
- Tailwind CSS 4 (CSS-first tokens; `.theme-a` / `.theme-b` token sets)
- No animation library: CSS transitions + IntersectionObserver (reveal, sticky story) — small JS footprint
- `next/font` (self-hosted Google fonts), `next/image` (unoptimized, pre-optimised WebP)
- Native `<dialog>` inquiry drawer (focus management, Esc), native `<input type=range>` compare slider

```
src/
app/
content/en/
content/index.ts

routes: /, /concept-a/*, /concept-b/*
ALL English copy (site, home, technology, solutions, support, company, media)
getContent(locale) — single entry point for copy
```

data/	locale-neutral product data (generated), catalog index, countries, visuals
components/shared/	Inquiry drawer/form, CompareSlider, Img, Logo, Reveal, Placeholder, LanguageSwitch
concepts/a/	Concept A design layer (header, footer, sections, pages)
concepts/b/	Concept B design layer
lib/	il8n registry, base-path helpers, SEO (JSON-LD), tech mapping
scripts/	extract-products.py, build-assets.py, visual-qa.py, e2e-check.py

10. Local Development

```
npm ci
npm run dev          # http://localhost:3000  (routes: /, /concept-a/, /concept-b/)
```

Content/asset regeneration (optional, needs Python 3 + Pillow + BeautifulSoup):

```
python3 scripts/extract-products.py --refresh  # re-read products from visionhitechsecurity.com
python3 scripts/build-assets.py               # rebuild WebP assets (needs .cache/raw)
```

11. Build

```
npm run typecheck
npm run lint          # eslint, zero warnings allowed
NEXT_PUBLIC_BASE_PATH=/visionhitech-renewal npm run build  # static export → out/
```

QA scripts (Playwright for Python):

```
python3 scripts/visual-qa.py http://localhost:PORT/visionhitech-renewal out_dir /concept-a/ /concept-b/ ...
python3 scripts/e2e-check.py http://localhost:PORT/visionhitech-renewal
```

12. GitHub Pages Deployment

`.github/workflows/deploy.yml` — on push to `main`: `npm ci` → `typecheck` → `lint` → `build` with `NEXT_PUBLIC_BASE_PATH=<repo>` → `upload out/` → `actions/deploy-pages`. Pages source is set to **GitHub Actions**. `trailingSlash: true` produces `/path/index.html`; `public/.nojekyll` keeps `_next/` assets.

13. Current Prototype Limitations

- Inquiry / contact forms are UI only. Submitting shows *"Prototype only. Backend connection will be implemented during production."* — nothing is sent.
- Product datasheets/manuals are not publicly linked on the current site → "Request document" opens the inquiry drawer.
- AI Vision, Transportation, Vision Marine, Security Policy, FAQ, Tech Support, Event, Newsletter, YouTube, LinkedIn, Organization: **placeholders** clearly labelled *Awaiting official content / To be confirmed*.
- Company history ends in 2020 and news posts date from 2020 (as on the current site).
- Product copy is shown as published on the current site (obvious typos corrected; list in the inventory).
- Search is client-side over the prototype catalogue; no site-wide search.
- No map embed; no cookie/consent layer; no analytics.

14. Future Production Development

1. Client selects a concept (or a merge) and confirms open items in the inventory (\$4 NEEDS CLIENT CONFIRMATION).
2. Official content for AI Vision / Transportation / Vision Marine / Support sub-pages, current company figures, image rights.
3. Headless CMS or structured content source for products & news (the data shape in `src/data` is CMS-ready).
4. Form backend (email API / CRM), spam protection, privacy notice, consent.
5. Document delivery (datasheet / manual / firmware) with access control if required.
6. Production domain, canonical URLs to `https://visionhitechsecurity.com/en/...`, remove `noindex`, `sitemap.xml`, `hreflang`, analytics, redirects from current WordPress URLs.
7. Accessibility audit (WCAG 2.2 AA) and performance budget in CI.

15. Future Japanese Localization

- Add `src/content/jp/*` with the same shape as `src/content/en/*`, register in `src/content/index.ts`, set `jp` to `live` in `src/lib/i18n.ts`. Components do not change.
- URL plan: `/en/...` and `/jp/...` with `hreflang` pairs; product facts stay locale-neutral in `src/data`.
- Fonts: Concept A → Noto Sans JP; Concept B → IBM Plex Sans JP (already in the CSS fallback stacks).
- Review after translation: font weight, line breaks (kinsoku), character width, navigation / button widths, bento card heights, paragraph length, responsive overflow, Japanese metadata & SEO, contact form fields (furigana, prefecture), search presentation.
- Japanese is **not** a mechanical translation: copy is localized and reviewed per the checklist above.
